

Semi-prefabricated or prefabricated chimney with "eco-keko" blocks of shell - a special construction

of li

lightweight concrete

composite

low-mass

(40

%

lighter than

existing

mantle)

and reinforcement from the outside with a guarantee of stability and self-standing chimney. Since

t

the material is

lightweight concrete

block

shell

, there is no need

for additional

insulation

between the

shell

and

solitary

cartridge.
